

Continuing Education Monograph

For Critical Care Nurses

ScvO₂ and Early Goal-Directed Therapy - The 6-Hour Window of Opportunity

Severe sepsis and septic shock are conditions of major concern in the intensive care unit (ICU). Over the past ten years, significant strides have been made in the treatment of these conditions, due in part to a worldwide effort by clinicians to reach a consensus about their definitions and optimal therapy. This monograph focuses on the pathophysiology of severe sepsis and septic shock and on interventions that improve oxygen transport and delivery.

Learning Objectives

- Describe the various stages and pathophysiology of sepsis
- Identify the hemodynamic parameters affected by sepsis and how they are measured
- Understand example guidelines available for the early treatment of sepsis

Accreditation

CE is provided for this monograph through collaboration between ProCE, Inc. and Wild Iris Medical Education, Inc. Wild Iris Medical Education, WSNA CEARP Provider number PA-5/Feb/11, is an approved provider of continuing education by the Washington State Nurses Association, an accredited approver by the American Nurses' Credentialing Center's Commission on Accreditation.
